NAME: June 3, 2024

1) These are some general directions for question one.
This is my first question, version a. Describe a variable and give an example.

_____

_____

_____

_____

_____

2) Trace the code and write what is printed. Be sure to include linefeeds as appropriate.
This is my second question version a.

```
alist = ['z','y','x']
for el in alist:
    print(el, end='')
```

_____

_____

_____

_____

3) Using the exam class to create a question. Answer the following question by selecting the appropriate option.

The assignment statement `a = b` sets the value of which variable?

◯ a

◯ b

◯ both

◯ neither

NAME:

1) These are some general directions for question one.
This is my first question, version b. Describe the meaning of type and provide an example.

2) Trace the code and write what is printed. Be sure to include linefeeds as appropriate.
This is my second question version b

```python
alist = [15,20,25]
for el in alist:
    print(el, end='')
```

3) Using the exam class to create a question. Answer the following question by selecting the appropriate option.

The assignment statement `a = b` sets the value of which variable?

○ a

○ b

○ both

○ neither
